University of Nebraska

PREGNANT COW and BULL SALE

**Thursday - February 3, 2005
12:00 noon**

at the
**KEARNEY LIVESTOCK MARKET
2020 Ave. F
Kearney, Nebraska**

Directions to Kearney Livestock Market from I-80 Exit 272 (US 10 & 44)

North to 11th street, turn East (right) on 11th and go to Ave F.
Turn North (left) at Ave F - go until railroad tracks stop you.
Located on the railroad tracks.

SALE TERMS AND CONDITIONS

BIDDING

1. Each animal will be sold to the highest bidder above a presale determined minimum for each class of cattle. The Auctioneer in charge will settle any dispute as to bids, and his decision on such matters shall be final.
2. Mail and telephone bids to Gordon Hays at MARC, P.O. Box 166, Clay Center, NE 68933, (402) 762-4121 or cellular phone (402) 469-9387, **the day of the sale.** Sale day telephone number for the Kearney Livestock Market (308) 237-3121.

TERMS

1. Terms of sale are cash or check in U.S. funds payable sale date. No two party checks will be accepted.
2. Make checks payable to the University of Nebraska-MARC.

PURCHASER'S RISK

1. Each animal sold becomes the risk of the purchaser as soon as sold; but it shall be the obligation of the seller to see that animals are fed and cared for free of charge to the purchaser until loaded for shipment through Saturday, February 5, 2005. After that date arrangements must be made with Kearney Livestock Market for further feed and care.
2. To avoid injuries that can occur at the loading out area, we strongly recommend cattle not be loaded into a standard farm pickup with stockracks.

HEALTH

1. All animals are eligible for interstate shipment. Interstate health papers will be furnished for each animal in accordance with Federal Regulations.
2. Sale animals were treated for internal and external parasites in October, 2004.
3. We suggest that out-of-state buyers consult with our staff veterinarian, Dr. Shuna Jones, (402) 762-4114 or their state veterinarian before the sale.

BREEDING GUARANTEE

1. All bulls have passed a semen test.
2. All bulls are guaranteed breeders. In the event an animal is proven to be a non-breeder, the full purchase price will be refunded with authorization from MARC Cattle Operations Manager. The bull in question will be sold for salvage by the buyer with proceeds going to the University of Nebraska-MARC. The return of the full purchase price shall, in any case, be deemed full satisfaction and settlement.
3. Cows have been palpated pregnant by MARC personnel. If any cow returns to normal estrus within 21 days after the sale, the full purchase price will be refunded. The cow in question will be sold for salvage by the buyer with proceeds going to the University of Nebraska-MARC. The return of the full purchase price shall, in any case, be deemed full satisfaction and settlement.

RIGHTS AND OBLIGATIONS

1. The above terms and conditions of sale shall constitute a contract between the buyer and seller of each animal and shall be equally binding upon both. Each sale or resale of an animal constitutes a separate transaction.
2. Neither the sponsor nor sponsoring association, the sale manager, nor any other person connected with the management of the sale assumes any liability, legal or otherwise.

General Information

The cattle offered for sale have completed their usefulness in the Center's research program. They were selected for this sale on the basis of performance and conformation criteria and are excess to our research needs.

All receipts from the sale of breeding and market animals are used to defray operating costs at the Roman L. Hruska U.S. Meat Animal Research Center.

The sale will start promptly at 12:00 noon, Thursday, February 3, 2005, at the Kearney Livestock Market at Kearney, Nebraska. Cattle will be on display beginning the afternoon of February 1, 2005, until sale time.

All bulls have weaning weights adjusted to 200 days of age, yearling weights are adjusted to 365 days of age, scrotal circumference is expressed in cm. while hip height is measured in inches. Age of dam adjustment factors for all breeds are the BIF additive factors.

The expected progeny differences (EPD) listed are predicted values based on performance of the animal's individual records as well as ancestral performance for each trait and are **derived from calculations made at the U.S. Meat Animal Research Center** and utilized in the experimentation here. Traits estimated are calving ease maternal, calving ease direct, birth weight, weaning weight, yearling weight and milk. Estimated breeding values (EBV) for twinning are described under Twinning in the next section.

The Twinning Project cows were bred to a bull with a high breeding value for twinning (59.9). In August, 2004 lots 1 thru 4 were diagnosed by ultrasound to be bearing twins. The cows are not guaranteed to have a multiple birth, but were bearing twins at the time of ultrasonography.

Following is a brief history for each breed offered for sale.

Angus: Cattle are from the Calving Ease and MARC populations. The cow herd was developed from seed stock transferred from the University of Nebraska herd at Lincoln. Outcross bulls have been used since 1990. All cattle are purebred. All are two-year olds and were bred to Calving Ease Angus bulls.

Gelbvieh: Cows are from the Calving Ease project. They are purebred but non-registered cows. They were bred to moderate framed MARC II bulls.

Composite: MARC II is 1/4 Gelbvieh, 1/4 Simmental, 1/4 Hereford and 1/4 Angus. Cattle are from both the Calving Ease project and the MARC populations. Some of the cattle from the MARC populations are products of widening that genetic base and have small percentages of other breeds. The heifers were bred to MARC II bulls selected for ease of calving. All are first calf heifers.

MARC III is 1/4 Red Poll, 1/4 Pinzgauer, 1/4 Hereford and 1/4 Angus. The heifers are from both the Calving Ease project and the MARC populations and

were bred to calving ease MARC III bulls. All are first calf heifers.

Crossbred: 1. Red Angus x Simmental - These F1 cattle were produced by mating industry leading Red Angus bulls to purebred Simmental cows. They have been used various ways in our breeding programs. They are half British and half Continental.

2. Piedmontese Cross - These cows have been part of the Germ Plasm Evaluation project studying animals with varying levels of the double muscling gene (myostatin). The cows vary from 1/4 to 3/4 Piedmontese with the residual being either Hereford or Angus. They were mated to Angus bulls.

3. Crossbred - The crossbred two-year old heifers (lots 29 through 32) were sired by either Red Angus-Simmental Cross bulls or Simmental bulls and where out of MARC III dams. These heifers were bred to MARC II bulls selected for ease of calving. These calves should be very similar to those from the MARC II and Red Angus x Simmental cows.

Twinning: The Twinning Project was started in 1981 by selecting cattle based on their ability to produce twins, from breeds that have above average twinning frequency. Replacement cattle are selected on their predicted ability to increase twinning frequency. Specifically, bulls are produced by mating proven sires, (i.e., those having daughters with high ovulation rate and/or twinning frequency) with the top 20% of cows based on estimated breeding value (EBV) for twinning. Presently, twinning rate in the Twinning Project is about 50%. The average twinning rate among all breeds of cattle not selected for twinning is less than 2%. Cattle produced in this project are large frame, growthy and muscular with desirable beef characteristics. Maternal ability in this population is excellent. Carcass data from steers fed high energy density diets have shown high cutability with relatively high levels of marbling. Breeds represented in this population include: (1) Holstein, (2) Simmental, (3) Charolais, (4) Brown Swiss, (5) Pinzgauer, (6) Gelbvieh, (7) Swedish Friesian, (8) Norwegian Red, (9) Shorthorn, (10) Hereford and (11) Angus. An EBV for Twinning is listed for each Twinning Project animal being sold. It can be anticipated that of the Twinning bulls offered in this sale, when mated to cows with an average ability to produce twins (2.0%), these matings will produce daughters who should have twin births 25-35% of the time, i.e., Bull A EBV = 60 + 2, the EBV of non-twinning cows, will produce daughters with EBV for twinning of 26%, $(60 + 2) / 2 = 31$. EPD's for Birth, Weaning and Yearling Weights are listed on these cattle for the first time this year.

How To Read The Information Printed In The Catalog

EXPECTED PROGENY DIFFERENCE (EPD)

The predicted values based on performance of the animal's individual records as well as ancestral performance of each trait and are derived from calculations made at the U.S. Meat Animal Research Center and utilized in the Calving Ease Project.

CE EPD		Birth		Weaning			Milk	Yearling		
Mat.	Dir	Wt	EPD	Wt	Ratio	EPD	EPD	Wt	Ratio	EPD
-0.5	0.4	80	2	601	112	10.5	6.0	1002	109	11.0
		Actual Birth Weight		Weaning Weight Adjusted to 200 Days				Yearling Weight Adjusted to 365 Days		

CALVING EASE EPD

A predictor of how it could change the calving difficulty score. A minus value would lower the score and a positive value would increase it.

Maternal: A predictor of the calving ease that an animal transmits to a daughter.

Direct: A predictor of the direct influence an animal has on calving ease of its progeny.

Calving Ease EPD Description

Calving Ease EPD is expressed as a deviation from 0. Values below 0 indicate the probability of reduced calving difficulty while values above 0 are indicative of more calving difficulty.

The calving difficulty scoring system used at MARC is:

1 = No assistance	4 = Average assistance with a calf puller	7 = Caesarean birth
2 = Assistance by hand	5 = Moderate assistance with a calf puller	8 = Abnormal presentation -
3 = Light assistance with a calf puller	6 = Major assistance with a calf puller	(not in EPD computations)

BIRTH WEIGHT EPD

A predictor of an animal's ability to transmit birth weight to its progeny.

WEANING EPD

A predictor of an animal's ability to transmit weaning growth to its progeny.

YEARLING EPD

A predictor of an animal's ability to transmit yearling growth to its progeny.

MILK EPD

A predictor of an animal's genetic merit for milk and mothering ability as expressed in its daughters, or in other words, that part of weaning weight attributed to milk and mothering ability.

Prog denotes progeny. **Individual** information is the number of progeny a bull or cow has, and the average weaning or yearling weight ratio of their progeny. The same information is listed for the sire and dam of the individual of that given lot.
